

VP-Young PM Development Elect: Yeung Kun Woon

OneMBA, MSc, BEng, HKITPC (SA), CMC

Introduction

Being a seasoned solutions architect with expertise in cloud computing, enterprise applications (i.e. Oracle and PeopleSoft), data analytics and blockchain technologies, John understands the significance of enterprise architecture, business analysis, solution design and technical development methodologies, and how these competencies are so essential to enterprises. He is now working for AWS as a senior solutions architect, helping customers design cloud solutions with new technologies. Having been over 18 years of IT experience, he works with customers to tackle different challenges in both business and technical perspectives, and helps them design solutions with cutting edge technologies to create value for their business developments. Prior to joining AWS, he held senior technical / management positions at various technology companies like IBM, Oracle and PCCW etc.

Moreover, John is very passionate about IT education and professionalism. He used to be a visiting lecturer / speaker to share knowledge and experience with the next generation in universities. Also, he published academic papers with other scholars and presented in international conferences. He was nominated to be the Vice President of Education of Project Management Institute PMI Hong Kong Chapter and an Executive Committee in the Enterprise Architecture Specialist Group of Hong Kong Computer Society HKCS.

Vision Statement:

Education is essential, especially in the current knowledge century. It is a way for the succession of our knowledge and experience. In each generation, we accumulate our wisdom and knowledge by personal experience or learning from others. Throughout the process, we keep improving our quality and contribute to the society. With this thought, I select this area – Young PM to be my interested development area. My vision includes the follows:

- Promote project management knowledge and practices to university students. That may pave the way for them to further develop interests in their career directions.
- Encourage senior professionals to share their management experiences and knowledge with university students, as a way of knowledge succession. That can help them have more ideas about the industry and facilitate the talent development of the local IT industry.
- Promote CAPM certification to universities and encourage students to become CAPM.

PMI Leadership Experience:

PMIHK VP – Education from 2017 to 2019
